INVESTOR OVERVIEW

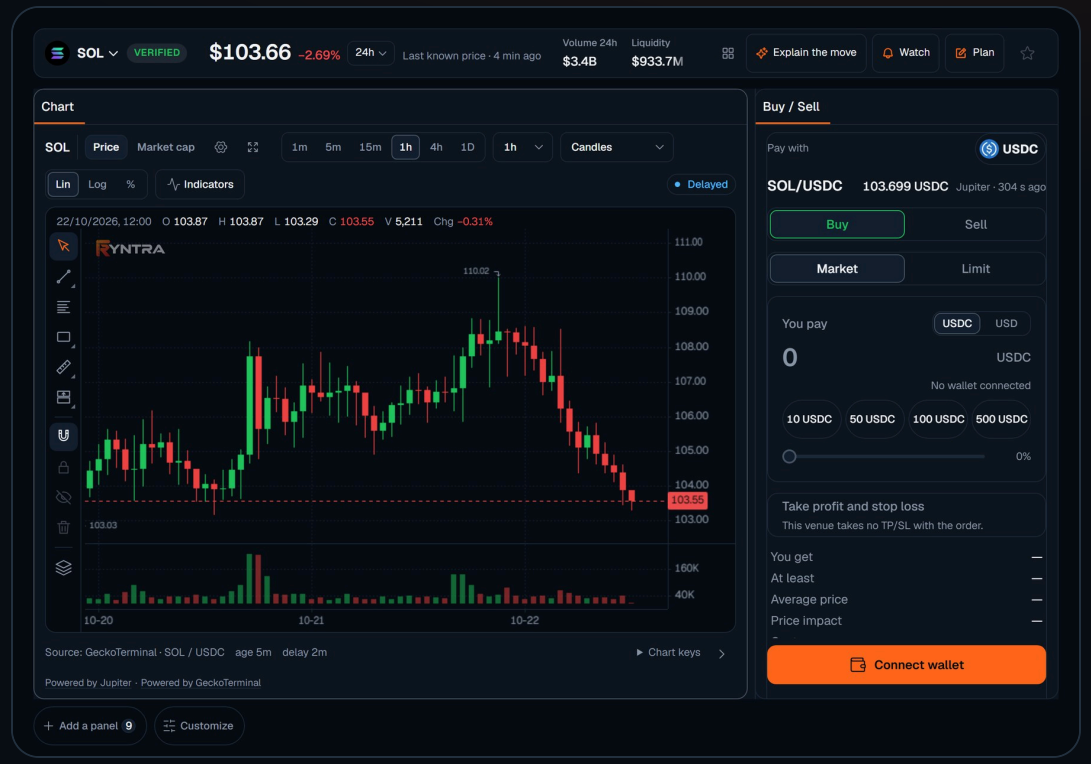

One Solana app for trading, launching and money

Ryntra puts Solana's best venues behind one review, one route and one receipt — and shares its revenue with the people who grow it.

v1.0.0 · checked 22 October 2026

THE PROBLEM

Solana's best products live in different places

01

Scattered venues

Swaps, stock tokens, launches, perps and pools each live in a separate app with its own rules.

02

Hidden costs

People sign raw transactions without seeing the route, the fees or what will actually happen.

03

Markets that fade

A token launches, and its creator is left without the tools, fees or liquidity to keep the market alive.

WHAT RYNTRA DOES

Review before signing, a receipt after

One app

Trade, invest, launch, perps, pools and money from one Solana wallet.

Non-custodial

The person's wallet signs every action; Ryntra never holds a key.

Built on Solana's best

Jupiter, Meteora, Phoenix and Squads do the execution; Ryntra builds the experience around them.

An assistant, not an adviser

Ryntra explains markets and checks plans; the decision stays with the person.

Ryntra assistant

WHY SOLANA

Solana-first, end to end

01

Speed people feel

Quotes in a fraction of a second and confirmations fast enough for a trading terminal.

02

The best venues

Deep liquidity and launch, perps and treasury primitives Ryntra builds on instead of rebuilding.

03

A phone in the pocket

An Android app in the Solana dApp Store and one-tap Seeker Connect.

04

One wallet

One Solana wallet for every product; money from other networks arrives by deposit.

HOW RYNTRA EARNS

Revenue from real activity, published in the product

STREAM	HOW IT IS CHARGED
Trading	0.1% on major tokens · 0.5% trending · 1% new and meme tokens · 0% stable to stable
Tokenized stocks	0.25%–0.5% per trade, by issuer
Token launch	48% of every curve fee · 60% of the graduation fee · a locked position in every graduated pool
Ryntra assistant	Credits bought in USDC; free credits every day
Perps on Phoenix	0.02% of the filled size on taker orders, on top of Phoenix's own fee
Predictions	A fee is set when real money opens

Trader rewards are paid from the fee Ryntra receives — 50% cashback and friends' shares. Creator partners' shares are counted within a 40% cap per pool and paid after Ryntra's first test payout.

GROWTH ENGINE

Partners and creators bring the market

Creators earn from their market

32% of curve fees, 40% of the graduation fee and half the locked liquidity.

Partners bring creators

20% → 10% of Ryntra's part of each creator's pool; payouts open next.

Traders bring friends

50% cashback and 10–30% on friends' trades, claimed to the wallet.

Details: the partner deck.

BUILT AND TESTED

Real product, real checks

No invented users or volumes — only what was measured and checked.

9,138

automated tests

in the release suite

1.9 s

to open a token's market

median, measured on production

0.15 s

for a quote

measured on production

CHECKED ON MAINNET WITH SMALL LIVE AMOUNTS

- ✓ Squads treasury — 5 transactions confirmed, from top-up to payout
- ✓ Perps collateral on Phoenix — USDC in and out
- ✓ Jupiter limit orders — placed and cancelled
- ✓ Assistant credits — paid with Solana Pay

USAGE

Published only when counted from the chain by a written rule.

Chain-counted figures, by one written rule →

WHAT IS HARD TO COPY

Built as one system

01

Own trading core

One ticket, terminal and chart core shared by every product.

02

Receipts and chain truth

Every action ends with what happened on chain and what it cost.

03

Published economics

Fees, splits and rewards read from the same code the product charges by.

04

Mobile and Seeker

A native Android app and Seeker integration on the same back end.

ROADMAP

Where we are and what comes next

Ordered by stage, not by date. Each stage is read from the build plan at every release.

Shipped

- Launch with chain proof and a creator cabinet
- Own trading terminal and charts
- Stocks, memes radar and wallet watch
- Money: add funds, send, receive, between networks
- Perps markets and USDC collateral on Phoenix
- Pools, Grid and a Squads treasury
- Ryntra assistant: news, brief, voice, credits
- Trader rewards and creator partner accounting
- Seeker Connect on the web
- Perps orders: long, short, limits and TP/SL
- Verified Seeker and .skr names

In progress

- Creator partner payouts
- Alpenglow-ready confirmations
- Treasury spending limits
- The full assistant in the phone app

Next

- Predictions with real money
- Team launch and a market cabinet
- Charts with live seconds and full history
- Founding partner seats
- A risk verdict in every review
- Auto DCA within a capped budget
- Team cabinet, then agents within mandate
- Ryntra Developers: SDK and widgets
- The phone app matches the web

PRINCIPLES & DISCLOSURES

What we do not claim

No profit, price or yield promises — for Ryntra or its users.

Usage is published only when counted from the chain by a written rule.

A stock token is not a share; access depends on the issuer.

Predictions money opens only after its live check.

Projections, if any, are labelled as projections with their method.

See it live, then talk to us
